WorkSync
DISCOVER • ALIGN • CAPTURE

WORKSYNC SERVICES · OBJECTIVE 05

Centralize operational data

One data layer, and your team runs it.

WHAT WE HEAR · owned by the CIO, Head of Digital, VP Ops

“Every report is a reconciliation before it is a report.”

“The person who maintains the spreadsheet is retiring.”

It comes up when: An acquisition, a system migration, a failed analytics rollout, or a team that spends its week joining data by hand.

THE THREE STEPS

01 DISCOVER

An integration inventory: every source, its owner, its refresh, and what it is trusted for.

02 ALIGN

One canonical model and governed tables in your own cloud, with lineage from the signal to the number in the report.

03 CAPTURE

Pipelines your team runs, data-quality rules that fail loudly, and the handover documentation to own them.

WHAT WE HAND OVER · basis: DELIVERED, three separate builds

Integration inventory	DELIVERED	Canonical and asset model	DELIVERED
Governed tables	DELIVERED	Data-quality and lineage baselines	DELIVERED
Automated reporting and dashboards	DELIVERED	Handover runbook	DELIVERED

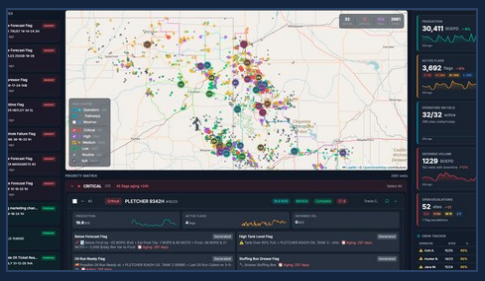

FIT

Multiple systems of record and a team that will own the result.

NOT YET

A buyer who wants the platform without owning any of it.

WHY WE CAN DO THIS · MAVERICK NATURAL RESOURCES, CATURUS ENERGY, PACIFIC NORTHERN GAS

WellOPS, running today: the control panel a supervisor opens at 6 AM.

One data store joining production accounting, reserves, SCADA and well records for Maverick Natural Resources. EHS, contractor and GIS systems brought into the client’s own cloud for Caturus Energy and Pacific Northern Gas, and a regulatory data model for the utility. Governed tables in production for two clients and for our own product.

Where it shortens the path, we use DataHub, our integration toolkit. It is not sold separately, and the program never depends on it.

Scan to reach us

THE FIRST YES

An integration inventory and a data path for one use case.

Start with a 2 to 4 week assessment. Fixed fee.
