DISCOVER • ALIGN • CAPTURE

WORKSYNC SERVICES · OBJECTIVE 09

Get more out of artificial lift

The barrels your data already knows about.

WHAT WE HEAR · owned by the Production Engineering Manager

"I know there are barrels in the lift. I cannot tell you which wells or how many."

"Lift spend is up and production is flat."

It comes up when: Flat production against rising lift spend, a gas-lift system nobody has re-optimized, or failures concentrated in one lift type.

THE THREE STEPS

01 DISCOVER

A lift value map on your own production, failure and cost data: which wells, which lift type, and what the data can actually support.

02 ALIGN

The readiness gaps closed first, because a lift optimization that runs on bad measurement gets switched off by week three.

03 CAPTURE

One pilot, measured against a baseline agreed before it starts.

WHAT WE HAND OVER · basis: WITH YOUR TEAM

Artificial lift value map	WITH YOUR TEAM	Lift data readiness assessment	WITH YOUR TEAM
Gas-lift optimization scoping	WITH YOUR TEAM	Lift failure analysis	DELIVERED
Pilot design and measurement	DELIVERED	Before-and-after measurement on one metric	DELIVERED

FIT

An operator with per-well production and failure history and a real lift population.

NOT YET

A promised uplift percentage. We do not have one from our own work, and inventing one is the fastest way to lose the second meeting.

WHY WE CAN DO THIS · WHAT YOU GET FIRST: A LIFT VALUE MAP, AND A PILOT ONLY WHERE YOUR DATA SUPPORTS ONE

Plunger-lift management and failure analysis delivered for Maverick Natural Resources. Gas-lift surveillance charts worsening efficiency by well, and deliberately stops short of recommending set-point changes. Waterflood is out of scope. We have no uplift percentage of our own yet, and we will not invent one.

Artificial lift optimization is one of the production-operations use cases McKinsey sized in August 2026.

Scan to reach us

THE FIRST YES

A lift value map on your own production and failure data.

Start with a 2 to 4 week assessment. Fixed fee.
